## DESCRIPTION

Blancett B1500 turbine flow meters have exceptional mechanical linearity, resulting in minimizing, or negating, temperature induced viscosity influence. Meters come with national pipe thread (NPT) or flange process fittings, sizes up to two inches and can be ordered with a Blancett B3000 flow monitor for advanced linearization and to accommodate the requirements of most applications and flow ranges.

| Features | Benefits |
| :--- | :--- |
| Expanded <br> mechanical linearity | Increased usable flow range with less <br> sensitivity to fluid temperature/viscosity <br> effects. |
| Helical rotor design | Exceptional speed-of-response, with <br> reduced pressure drop. |
| High-performance <br> ceramic ball bearings | Ceramic bearings provide near-perfect <br> roundness, higher Rockwell hardness <br> and are lighter and more tolerant to <br> temperature than 440C stainless steel <br> bearings. They eliminate adhesive wear <br> and perform well in non-lubricating <br> liquids found in cryogenic fluids <br> and water. |
| 6-bladed rotor <br> supports | Improved flow conditioning. |
| Facility with NIST |  |
| traceable standards | Third party audits to ensure calibration <br> uncertainty. Laboratory correlation to <br> verify that all calibrators produce the <br> same result. |

## OPERATING PRINCIPLE

As a fluid passes through the meter, the velocity of the fluid provides rotational energy on the rotor blade assembly. The rotor blades, passing through a magnetic field (produced by the pickoff), generate pulses proportional to flow. Each pulse is transmitted to the flow monitor, where the monitor calculates the flow relative to received pulses and meter size.

## APPLICATIONS

Blancett B1500 flow meters are the ideal solutions for standard clean, filtered liquid flow applications in precision industrial processes, found in the chemical/petrochemical, refining and general industries.

## CALIBRATION

Meters come with a best-in-class 10-point calibration, traceable to NIST standards, using calibration solvent.

## CONSTRUCTION

Blancett B1500 flow meters feature 316 stainless steel housings. Wetted materials include axial helical rotors, made of 17-4 stainless steel, that rotate on ceramic ball bearings. The supports and all other materials are made from 300 series stainless steel.

## METER INSTALLATION

Blancett B1500 flow meters mount directly in the piping and can be installed in any position without affecting performance. For optimal performance, recalibrate the meter if the mounting orientation is changed from the original horizontal calibration.

To reduce flow turbulence, install a minimum of 10 diameters in length of straight piping upstream and a minimum of five pipe diameters downstream. If this cannot be accommodated due to space limitations, pay careful attention to the location of valves and bends. To compensate for piping bends, meters can be calibrated in the same piping configuration. For best performance and longevity, upstream filtration (10... 75 micron, depending on meter size), is helpful to prevent bearing contamination and to avoid rotor blade damage.

## OPTIONAL SYSTEM CONFIGURATION

As an added benefit, B1500 flow meters that are coupled to B3000 flow monitors provide an economical, robust flow metering solution, with multiple local read and system integration options. Flow rates and totals are presented simultaneously via a crisp dot-matrix LCD display and/or transmitted to a user interface via Modbus RTU, a $4 \ldots .20 \mathrm{~mA}$ analog output or totalizing pulse output. Basic, advanced and solar-powered configurations provide users with flexibility to meet the needs of most applications. Product configurations can be mounted in multiple ways, further expanding product flexibility to create a complete flow metering solution.

## NOTES:

1. Pressure ratings listed are for temperatures up to $100^{\circ} \mathrm{F}\left(37.8^{\circ} \mathrm{C}\right)$.
2. Pressure rating is calculated with an allowable stress value of 20,000 psi ( 1378 bar ) for 316 SS per pressure piping code ASME B31.3.
3. Chart is displaying safe working pressure, in accordance with power piping code ASME B31.1.
